Consultant discovery carousel

SVG files you can upload. Not a native Canva template.

A three-slide Instagram carousel for an independent consultant. The sample copy belongs to a fictional operations consultant, Naledi Mokoena, and walks a buyer from the problem to the session price.

Files and sizes

File	Pixels
slide-01-problem.svg	1080 x 1080
slide-02-session.svg	1080 x 1080
slide-03-price.svg	1080 x 1080

How to edit

1. Duplicate the three SVGs and replace Naledi's name.
2. Keep one idea on each slide: the mess, the session, the price.
3. Export PNG from your editor if a channel rejects SVG.

Canva, Figma, and print

Create a design at the pixel size in the table, then upload the SVG. In Canva this is an upload, not a brand template from Canva's library. In Figma, place the SVG and edit the text layers. For print, add bleed in the editor. The SVG is the design area.

Sample names and offers in these designs are fictional. Replace them before you publish. This package is not a native Canva file.
