# Listing card for a flat

SVG files you can upload. Not a native Canva template.

A listing card for a fictional two-bedroom flat in Observatory, Cape Town. The card leads with rent and the fact that the desk fits under the window. It is not a property advertisement you can publish as-is.

## Files and sizes

| File | Pixels |
|---|---|
| listing-card.svg | 1080 x 1080 |

## How to edit

1. Replace the suburb, rent, and the single detail.
2. Do not add more than one claim about the flat.
3. Pair the card with your own photograph. This SVG is the type layout, not a photo of a home.

## Canva, Figma, and print

Create a design at the pixel size in the table, then upload the SVG. In Canva this is an upload, not a brand template from Canva's library. In Figma, place the SVG and edit the text layers. For print, add bleed in the editor. The SVG is the design area.

*Sample names and offers in these designs are fictional. Replace them before you publish. This package is not a native Canva file.*
