Case-study cover

SVG files you can upload. Not a native Canva template.

A 1920 by 1080 cover for a fictional case study: a bakery site that cut the phone orders. The result is in the title so the slide is not only a logo.

Files and sizes

File	Pixels
case-study-cover.svg	1920 x 1080

How to edit

1. Lead with the result you can evidence.
2. Put the client name in the eyebrow only if you may name them.
3. Follow this cover with your own pages. The kit is the cover, not the whole case study.

Canva, Figma, and print

Create a design at the pixel size in the table, then upload the SVG. In Canva this is an upload, not a brand template from Canva's library. In Figma, place the SVG and edit the text layers. For print, add bleed in the editor. The SVG is the design area.

Sample names and offers in these designs are fictional. Replace them before you publish. This package is not a native Canva file.
