FIN-013 · Personal finance

Net worth snapshot

Replace the sample figures before you rely on the result.

The sample person has R14,500 in cash, a vehicle they value at R70,000, and R2,000 of furniture. Debts are R36,500. Net worth is R50,000. The vehicle value is the owner's estimate, not a dealer offer.

How to use the workbook

1. Use cash balances from the banking app on the day you fill this in.
2. For a vehicle or furniture, use a conservative amount you could accept, and say so in the note.
3. Use statement balances for debts.
4. Read cash assets separately from net worth. A positive net worth can still be short of cash.

Worked example

Cash is R14,500.

- Other assets are R72,000.
- Debts are R36,500.
- Net worth is R50,000.

A practical routine

- Update this on the first of the month.
- Do not add the same asset twice because two people share it. Agree the share and enter only your share.
- A retirement fund can be added as its own row with kind Other if you know the latest statement value.

This workbook organises figures you type in. It is not financial, credit, insurance, or tax advice. Rates, fees, and laws change. A qualified adviser should review decisions that affect debt, tax, medical cover, or retirement.
